Abstract

The Center for Remote Sensing of Ice Sheets (CReSIS) has developed many radars that operate over the frequency range from 140 to 230 MHz with multiple receivers developed for airborne sounding, and imaging of ice sheets. Understanding the echogram data depends on knowing the process of how radar waves interact with natural surfaces. The purpose of this project was to use the Bas Relief filter for image processing in order to improve the interpretation of radar imagery. The filter, Bas Relief, currently in Photoshop, was once a sculpture technique in which figures or other design elements were just barely more prominent than the overall background. The University of Kansas CReSIS office heavily relies on the use of MATLAB along with Photoshop to perform several tasks. MATLAB is a high-level programming language and interactive environment with strong mathematical and graphics capabilities while Adobe Photoshop CC allows you to use advanced image processing algorithms that are not available in MATLAB. With Adobe Photoshop Extended we hoped to combine MATLAB commands with Photoshop's image editing features to further interpret imagery. With the implementation of this algorithm in MATLAB, it would allow researchers to conveniently retrieve and use the newly edited image. By comparing the original image versus enhanced, researchers would be able to improve tracking of features such as internal layers and the ice bottom.

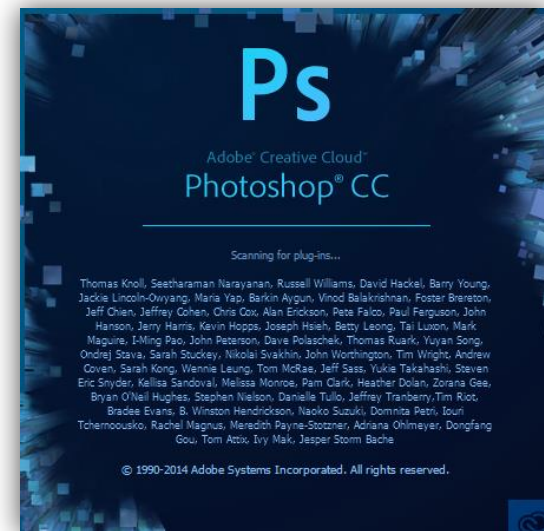

Purpose

- Use the Bas Relief filter for image processing in order to improve the interpretation of radar imagery.

MATLAB/Photoshop Interface

- Photoshop JavaScript interface and the MATLAB library interface.
- Not many people have worked with this yet
- Very powerful tool

Bas Relief

- Type of edge detection
- Eliminates all vertical and horizontal blank spots in the image

CRISIS
Center for Remote Sensing of Ice Sheets

Photoshop Toolbox

- Psnewdocmatrix – creates a new Photoshop document from a matrix and send an image from in MATLAB
- Psgetpixels() – reads the pixel data of the current visible layer back into MATLAB

Filter functions.

[psaddnoise](#)

- Run the Add Noise filter.

[psaverage](#)

- Run the Average filter.

[psblur](#)

- Run the Blur filter.

[psblurmore](#)

- Run the Blur More filter.

[psboxblur](#)

- Run the Box Blur filter.

[pscustom](#)

- Run the Custom filter.

[psdustandscratches](#)

- Run the Dust and Scratches filter.

[psgaussianblur](#)

- Run the Gaussian Blur filter.

[pshighpass](#)

- Run the High Pass filter

[pslensblur](#)

- Run the Lens Blur filter.

[psmaximum](#)

- Run the Maximum filter.

[psmedian](#)

- Run the Median filter.

Example program

```
Editor - C:\Users\kmcDonald\Documents\MATLAB\test2.m*
test2.m* x test_radar.m x test_radar2.m x openradar.m x +
1
2  % This program converts a .PNG file format to a .MAT or .NC file format. Then
3  % after it reads the image it will display the image in Adobe Photoshop
4  % with the specific filter assigned, and then displays that image back in
5  % MATLAB.
6
7
8 - fn = imread('radar_img1.png','png'); % Reads image from graphics file
9 - save ('radar_img1.mat','fn'); % Saves image under new file format
10 - data = load_L1B('radar_img1.mat'); % Loads the image
11 - A1 = data.fn;
12 - psnewdocmatrix(A1); % Opens the image in Photoshop
13  psboxblur % Specific filter
14 - imshow(psgetpixels()) % Sends the image back to MATLAB
15
16
17
```

“Final” Draft

```
Editor - C:\Users\kmcDonald\Documents\MATLAB\interface.m
test2.m x test_radar.m x test_radar2.m x openradar.m x interface.m x +
1  %This program loads a Radar Echogram Image, Scales it, applies the filter
2  %then sends to photoshop along with reopens in MATLAB. Both images are grey
3  %though
4  %7/10/14 ~ Final Test Run
5  %A_scaled = data type conversion((0-255(original image value-min value of image)))/max val
6
7  - fn = 'Data_20140515_02_006.mat';
8  - mdata = load_L1B(fn);
9  - fx = (10*log10(double(mdata.Data)));
10 - A_scaled = uint8((255.0.*(fx - min(min(fx))))./(max(max(fx)) - min(min(fx))));
11 - psnewdocmatrix(A_scaled);
12 - |pssharpenedges % Add whatever filter here
13 - imshow(psgetpixels()) %sends image back to MATLAB
```

Script Listener

- AppleScript – Mac OS
- VBScript - Windows
- JavaScript - Both

```
ScriptingListenerJS.log
// =====
var idTk = charIDToTypeID( "Tk " );
var desc1 = new ActionDescriptor();
var idNw = charIDToTypeID( "Nw " );
var desc2 = new ActionDescriptor();
var idPreset = stringIDToTypeID( "preset" );
desc2.putString( idPreset, "648 x 480" );
var idDcm = charIDToTypeID( "Dcm" );
desc1.putObject( idNw, idDcm, desc2 );
executeAction( idTk, desc1, DialogModes.NO );

// =====
var idTk = charIDToTypeID( "Tk " );
var desc3 = new ActionDescriptor();
var idNull = charIDToTypeID( "null" );
var ref1 = new ActionReference();
var idLyr = charIDToTypeID( "Lyr." );
ref1.putClass( idLyr );
desc3.putReference( idNull, ref1 );
executeAction( idTk, desc3, DialogModes.NO );
```

Conclusion

- Provided a new technique for researchers
- MATLAB workshops
- Extensive test programs

Future Research

- Re Scaling function
- Multiple Images
- Script Listener
- Bas Relief operation must be written

I would like to thank CReSIS for the opportunity to continue performing research with the program.

John Paden for assisting me even while out of the office

Darryl Monteau and the rest of the CReSIS staff at KU for making us feel at home.
